TITLE : MOTOR-FITTING APPARATUS

ABSTRACT : PROBLEM TO BE SOLVED: To improve productivity of a motor-fitting apparatus in the apparatus comprising a motor.

SOLUTION: A motor 3, having a recess 3f at the end surface, is provided. A displacing portion assuring deformation, including a projected portion 2h to be engaged with the recess 3f, is also provided, and a base portion 3a to which a motor 3 is fitted is also provided. An engaging portion (small screw with a stepped portion 55), that is provided to the motor to fix the motor 3 to the base portion 2a, is provided. Moreover, an engaging portion (hole 2b, guide hole 2d), that is provided at the base portion 2a for engagement with the engaging portion (55), is provided.
